

News Release

CubelQ Announces e-Signature Services™

[EN] Athens, GR, **May 29th, 2020** - **CubelQ Limited**, an IT company provider of software solutions and systems for financial, banking and corporate institutions, announces **e-Signature Services™**.

The separation of customers and partners due to the current hygiene conditions is currently occupying companies more than ever. However the transition from the traditional office work to a modern of signing while working from home, on the go or anywhere remotely is easy, efficient and simple with our online solution of “**e-Signature Services**”.

Using “**e-Signature Services**” you can continue to work in a networked way and benefit from the simplicity of a contactless signature process without media discontinuity.

Our “**e-Signature Services**” is based on Signotec’s “signoSign/Universal” platform which is a web-based application that can be used with **signature pads on the PC** as well as with **mobile devices and a web browser** or a mobile optional application.

The solution provides the ability to sign and then send or share a document simply by using a link. This allows having a document signed remotely in three steps:

1. Upload document
2. Send link to share
3. Download finished document

The recipient opens edits and signs the document via the link, absolutely contactless. The completed, signed document can then be downloaded from both parties for further processing.

Your advantages of using “**e-Signature Services**” and signotec hosting are:

Easy to use:

- Easy administration of documents and templates via a web interface.
- Share or send documents via link.
- Secure download of finished documents from the web interface.
- Optional use of the mobile apps.

Legal conformity

- Advanced electronic signature with biometric signature data.
- Trustworthy and **eIDAS-compliant** signature certificate.
- ISO-compliant PDF signatures with signature and change history directly in the PDF.
- Standardized contract for commissioned data processing.
- Optional deactivation of the capture of biometric signature features.

Security

- Secure hosting in a certified data center in Germany.
- E-signatures with **SHA-256** algorithms and **2,048-bit** key length.
- Protected TLS connection with a highly secure SSL certificate
- Signotec support in Germany.

Coming soon:

- E-mail notifications when saving shared documents..
- Automatic sending of the sharing link by mail.
- Automatic sending of the sharing link via SMS (optionally bookable).
- Simpler view for recipients of shared documents.
- Flexible user settings.

We campaign the “e-Signature Services” until July 31st.

We are pleased to provide the service with a free one-month trial version, so that you can test the service simplicity and security. After the trial period the system can be used for a **flat rate per user per year**. There are no additional costs per transaction. For larger user groups or groups of users we will be happy to provide you with **volume discounts**. If an order is concluded during the campaign period, the flat-rate installation fee **will not be charged**.
