

News Release

CubelQ announces the availability of Card Instant Issuance Application – CiiA™ new release 4.00.xx

Athens, GR, **March 15, 2011** - **CubelQ Limited**, an IT company provider of software solutions and systems for financial and corporate institutions, today announces the availability of Card Instant Issuance Application – CiiA™ platform **new release 4.50.xx**, a leading software application specially designed for managing the issuance of plastic cards at remote sites such as a bank branch and merchant outlets (local – instant issuance).

Card Instant Issuance Application - CiiA™ suite is designed to operate in banks and financial institutions that are issuing or are planning to issue ATM, Cash, Debit or Credit plastic cards at their branches. As a marketing concept, CiiA™ provides significant value to banks enabling them to differentiate from competitors, upgrade the "image" of the institution, increase customer acceptance, offer better quality of service, minimize operating cost and have faster time - to - market for new products. It enables banks to deliver their cards and train their customers at the branch thus increasing customer acceptance of card usage and card products.

Platform Release 4.00.xx is a functional breakthrough as the product has evolved to support **card personalization machines from different vendors**, therefore CiiA™ from release 4.00.xx and on becomes **vendor neutral application**. In this release a new software layer has been developed that isolates card personalization business logic from the actual card personalization mechanism that is used from the different card personalization machines manufacturers. With this new design the intermediate layer receives requests for card personalization from the business layer in an "abstract mode" and translates the requests to the actual "commands" required by the different card personalization machines manufacturers.
