

News Release

CubelQ announces the Licensing of Paragon's ATMulator Plus™ to a Multi-National Bank

[EN] Athens, GR, **February 23rd, 2013** - **CubelQ Limited**, an IT company provider of software solutions and systems for financial, banking and corporate institutions, announces the licensing of Paragon's ATMulator Plus™ to a Multi-National Bank.

The customer is a Multi-National Bank with headquarters in Athens Greece and presence in Albania, Bulgaria, Romania, Serbia, Ukraine, Cyprus and Egypt. The Bank has a network of 900 branches and 1700 ATMs in Greece and 451 branches in Southeastern Europe and Eastern Mediterranean banking subsidiaries. ATMs management and processing is consolidated to a centralized transaction processing and monitoring system in Athens Greece.

ATMs are an important electronic banking channel and a branding tool offering targeted marketing messages and specialized services. Creating and testing ATM configurations to take advantage of state-of-the-industry services can be challenging. **ATMulator Plus™** is a Windows®-based graphical development and testing tool combining ATM simulation with the powerful "load file" configuration abilities of **ConfigBuilder™** to develop ATM configurations and perform the entire transaction flow.

The Bank is using ATMulatorPlus™ to improve QA testing efficiency and to reduce testing cost and time to market for new ATM features and marketing campaigns. The software is easy to use and allows users to reproduce test cases that are hard to generate in a real ATM, like device faults. ATMulatorPlus™ also is especially helpful as it allows testers to execute test cases in minutes, rather than days. The extensive logging facilities of ATMulatorPlus™ help to produce testing documentation easily and keep test records for future reference and audit.
