

News Release

CubelQ Announces the Availability of the new version of eInventory™ Software Application

[EN] Athens, GR, **June 29th, 2015** - **CubelQ Limited**, an IT company provider of software solutions and systems for financial, banking and corporate institutions, announces the availability of a new version of **eInventory™**.

eInventory™ has been an integral module of CubelQ's Card Instant Issuance Application – CiiA™ from its client /server version interception for monitoring card stock and consumables, supervising card transfers between central, storage and production sites and for controlling card production.

eInventory™ new generation is a **multi-layer**, autonomous plastic card electronic inventory and stock control software application design to be used in banks and ISP for supporting the personalization cycle of plastic cards and it integrates seamlessly with CubelQ's **EMVPro™**, CubelQ's **CiiA™** and CIM's **MultiCard™** card personalization software applications. **eInventory™** can integrate with **any card personalization software application** as long as information on card consumption and card printing status can be shared by the card personalization software application.

eInventory™ new generation has a **multi-tier** client-server architecture, with all new Web based User Interface and operates in a multi-layer environment (warehouse, central department, personalization site and branches) with layered users (central card department manager and officers, personalization site manager and officers, branch manager and officers).

eInventory™ new generation supports card and consumables inventory, monitors stock buffers for all layers, performs automatic orders and orders' processing for all layers and supervises card transfers between participating layers - departments and branches.

When **eInventory™** is used by an ISP, external customers can be connected, exchanging information, participating and monitoring card personalization processes.
